WORK EXPERIENCE

GNH Corporation

Sept. 2023 – Present

Fullstack Developer

- GNH is the parent company of several other companies belonging to different sectors such as finance, professional sports, and the pharmaceutical field.
- Developed the accounts receivable system from scratch now used companywide, which connects to the accounting, inventory, and sales systems
 - Stack: Angular 14, Tailwind, NodeJS, Express, MySQL.
 - Fully complies with the operations carried out at several companies inside the corporation.
 - Designed the database for the accounts receivable system with a focus on speed and optimization for both quick generation of reports and display of real-time.
 - Consumes a REST API.
- Developed the buying orders system that is now used companywide and interacts with the accounts payable system and inventory system.
 - Stack: Angular 14, NodeJS, Express, MySQL.
 - It gives complete control to the user on how to control orders made on it, change statuses, and manage inventory.
 - Complete traceability of orders from start to finish
- Helped with an accounting system that compiles information from other systems used in the company and then exports that information to CONTPAQ Accounting
 - Front-end work, including the main module where the user checks general information compiled from other systems, like sales and accounts receivable
 - Back-end work to support several modules
- Developed the accounts payable system based on my previous work on the accounts receivable system
- General work on the inventory system such as bug fixes, design improvements, new features, and interaction with other systems such as the accounts payable system.
- General front-end work on the sales system

GNH Corporation

Nov. 2022 – Dec. 2022
